NADUPURU MAHARSHI

Full-Stack, AI & Android Developer | B.Tech CSE, 2nd Year

+91-8121092007 | maha.dev.2c0@gmail.com | github.com/Maharshi-spec
linkedin.com/in/maharshi-nadupuru-5b8929368 | qiskitfest.cutmap.ac.in

SUMMARY

Second-year B.Tech CSE student and hackathon team lead who builds and deploys full-stack web, Android and AI systems. Built the official Qiskit Fall Fest 2026 website for CUTM, now live with real users. Trained a YOLO pothole detector (0.92 accuracy) for HackYatra 2026 and took part in Smart India Hackathon in two consecutive years. Comfortable taking a project from idea to deployment, including servers, databases and client delivery.

EXPERIENCE

Research Intern – Quantum Computing and Hyperspectral Imaging

CUTM VZM | Feb 2026 – May 2026

- Contributed to research on integrating quantum computing with hyperspectral imaging.
- Learned quantum circuits and Qiskit; explored AI–quantum hybrid computational approaches.
- Assisted with experimentation, data analysis and research documentation.

Freelance Web Developer

Client projects (private repositories)

- **HAVNIX** – built and delivered a client website. Paused while the client focuses on mass production; going live again in a few weeks.
- **Bhagat Publications** – built a web app for a publishing client, deployed on Render with Supabase storage. Currently closed on the client side due to a company issue.

EDUCATION

B.Tech – Computer Science and Engineering

Centurion University of Technology and Management, Vizianagaram | 2025 – Present (2nd year)

PROJECTS

Qiskit Fall Fest 2026 Website – qiskitfest.cutmap.ac.in

Official CUTM project | Team Lead | Live

- Built at the college's request as the official site for the event; live and used by participants.
- Covers the event schedule, speakers, hackathon and workshop details, registration and certificate generation.
- Led the team and handled deployment and server maintenance.

Tech: *JavaScript, Node.js, Vercel*

S.P.O.T-V – Smart Pothole Detection & Reporting

HackYatra 2026 | GVMC Civic Innovation Track | Team Lead

- Citizen mobile app that reports potholes using GPS, photos and accelerometer-based detection, with a GIS dashboard for authorities to verify, prioritise and track repairs.
- Trained a YOLO model (0.92 accuracy) that detects potholes with live GPS.
- Kept building after the hackathon through three follow-up projects that extend Yukti (private repositories).

Tech: *Kotlin, Android, YOLO, GIS*

One-for-all – Offline Edge AI Voice Assistant

Smart India Hackathon 2026 (internal round) | Problem Statement 21 | Team Lead

- Multilingual assistant for Telugu, Hindi and Odia: listens, answers with a small language model running on the Android device, and speaks the answer back, fully offline.
- Designed as a software-first prototype for the Chromite-M RISC-V SoC.

Tech: *Kotlin, Android, Edge AI, speech synthesis*

SKILLS

Core Knowledge

CS Fundamentals | Web Development | Backend | Database | Frontend | Server Maintenance & Deployment | Android Apps | Game Development | Model Training & Fine-tuning

Programming

Python | C | Java | JavaScript | HTML | CSS | PostgreSQL | React

Android Development

Kotlin | Jetpack Compose | Android Studio

AI / ML

YOLO | MediaPipe | Edge AI

Game Development

Unity (Learning) | Blender (Learning) | UPBGE (Learning)

GIS & Geospatial

Google Earth Pro | Google Earth Engine | QGIS

Tools

Linux | Git & GitHub | VS Code | IntelliJ IDEA | Google Colab | Google Cloud | Qoder | Antigravity

HACKATHONS & ACHIEVEMENTS

HackYatra 2026 – built S.P.O.T-V for the GVMC Civic Innovation Track

Smart India Hackathon – internal round in both years: AgroGuard (1st year), One-for-all (2nd year)

Team Lead – College Hackathon; College Event on Farmers' Issues

Tech talks – host and speaker for juniors on game development and AI

Official event website – Qiskit Fall Fest 2026 for CUTM, live with real users

TRAINING

NPTEL – GIS and drone map analysis (3-month course, in progress)

RELEVANT COURSEWORK

C Programming, Java Programming, Data Analysis using Python, Discrete Mathematics, Probability & Statistics, Mechanics for Engineering, Electrical Devices & Systems, Basic Electrical Engineering, Environmental Science, Climate Change Sustainability, Design Thinking

RAKSHA-GRID – Flood Danger Detection

- Identifies potentially flood-prone danger areas across India and generates an escape route to the nearest safe place along a safe route.

Tech: *Python*

EcoQuest – Android Game

- Android app that creates a game-like environment where the player works to save nature.

Tech: *Android*

MINDWAVE – Stress and Emotion Analyzer

Jan 2026

- Real-time webcam app using MediaPipe Face Mesh to analyse facial micro-expressions, blink rate and head jitter and compute a stress score.

Tech: *JavaScript, MediaPipe, computer vision*

Game Projects

- **The Fallen Crypt** – Java game built with libGDX and Gradle.
- **Dragon Kingdom** – fantasy adventure Minecraft mod in Java (team project).

Tech: *Java, libGDX, Gradle, Minecraft modding*

Other Projects

- **eco-vet-guard** – web app built with React, TypeScript and Supabase.
- **Quantum Campus Energy** – Python starter for campus energy monitoring and analysis.

POSITIONS OF RESPONSIBILITY

Class Representative – Aug 2025 – Present

Member: AIML Club, Filmmaking Club, Media Resource Center, CUTM VZM

MEMBERSHIP

IEEE Student Member – 102145003

LANGUAGES

Telugu (Native), English
